

2023-5502 Addendum

Because our project aims to develop a model which can predict the pharmacokinetic profiles of different drugs in patients with varying characteristics, the high-quality data of pharmacokinetics is required. The inclusion of diverse therapeutic areas is essential to ensure the broad applicability of our model, covering a range of drugs and treatment regimens. This approach enhances the practicality and generalizability of our model, contributing to the advancement of precision medicine.

Regarding the selection of the 2 consumer trials (sponsor #s 97-024 and 02-161), we believe that each dataset in the YODA Project is crucial and irreplaceable. The choice of these trials is deliberate, aiming to acquire comprehensive and diverse data to effectively validate our model across different demographic groups. We believe that these trials will provide a more comprehensive data foundation for our research.
