

Project Summary Report

YODA Project # 2018-3131

“Treatment outcomes with biologics in moderate-severely active Crohn’s disease stratified by ileal vs. colonic disease location”

Objective

Through patient-level analysis of clinical trials, we will compare placebo-adjusted rates of achieving clinical remission in biologic-treated patients with Crohn’s disease who predominantly have ileal disease vs. colonic disease.

Methods Used

Unfortunately, our statistician for this project moved, and we could not complete the analysis

Results

No data was downloaded or used. No analyses were conducted.

Conclusions

N/A.
