

YODA Project Report : Protocol Number 2015-0649

June 21, 2018

PI: Chunhua Weng, Columbia University

1. Objective

We requested access to YODA data to develop a quantitative metric that is able to quantify the population representativeness of each clinical trial using multiple study traits while accounting for their dependencies and relevancies.

2. Methods Used

Our analysis was not completed because the postdoc assigned to this project moved onto other research project and we lacked the personnel to continue the proposed research to completion at this point. Another barrier is the data cannot be integrated with other data sources to develop the representativeness metric.

3. Results

None.

4. Conclusions

N/A
